

Livestock Breeding & Birth Calendar

Plan, track, and log livestock breeding cycles, due dates, and birthing events for all types of homestead animals.

How to use it

Start in Row 2. Fill in each planned or completed breeding event. Enter all relevant details. Calculated fields (like due date) should be manually worked out per guidance, as live formulas are not provided. Review and update as the breeding cycle progresses. Use health notes and reminders columns to track key observations and action items.

Quick start

1. Before breeding, enter animal identity, pairing, and breeding date.
2. Look up gestation length for your species. Enter in days.
3. To estimate due date, add the gestation days to your breeding date.
4. Use reminder fields to note any key prenatal care, vet checks, or preparations.
5. After birth, fill in actual birth date, outcome, and health notes.
6. Update health/notes throughout the process as needed.

Breeding & Birth Calendar

What goes in each column

1. Enter the animal's unique identifier or name.
2. Specify the animal's species (e.g., goat, sheep, cow, rabbit, etc.).
3. Enter the breed, if desired.
4. Name or ID of the mother.
5. Name or ID of the father.
6. Record the breeding or insemination date.
7. Enter gestation length for the species (in days, e.g., goat=150, cow=283).
8. CALCULATED: Add gestation days to breeding date to determine due date.
9. Fill in the actual date of birth after it occurs.
10. Briefly note litter size, complications, etc.
11. List any required checks, reminders, or veterinary appointments (e.g., ultrasound date, prenatal checks, supplement schedule, vaccines, etc.).
12. Ongoing health notes, observations of the dam and newborn(s), or follow-up needs.

Columns you work out yourself

- **Estimated Due Date:** Add the number of gestation days to the Breeding Date (count forward from breeding date by the total gestation days for the species).
