

Preserving & Pantry Tracker

Track your preserved food inventory—canned and frozen—so you always know what you have, what needs using soon, and when to replenish.

How to use it

Fill in a row each time you add a new batch to your pantry, freezer, or shelf. Update the 'Used' column as you use jars or packages. Check conditional formatting for items that need using soon. All inventory totals are calculated by hand.

Quick start

1. Enter a food and batch as you preserve, one per row.
2. Add the date, how many you put up, and the shelf life or use-by date.
3. Each time you use something, increase the 'Used' column and update 'Qty in Stock'.
4. Review rows with near or past use-by dates first. (Apply your own cell color for these if you wish.)

Pantry & Freezer Log

What goes in each column

1. Name of the food or item (e.g., Tomato Sauce, Strawberry Jam, Green Beans).
2. Mark as 'Canned' or 'Freezer'.
3. Date you preserved or froze the batch (MM/DD/YYYY).
4. Number of jars, pints, quarts, or packages added for this batch.
5. Number of jars, pints, etc. used so far. Update as you go.
6. Subtract 'Used' from 'Qty Added'—fill in the result to show remaining stock. (Calculated column.)
7. Best-by or recommended use-by date for this batch (MM/DD/YYYY).
8. Any notes (recipe used, source of produce, lid type, comments on quality, etc.).

Columns you work out yourself

- **Qty in Stock:** Write the result of 'Qty Added' minus 'Used'.
